Section VI. Specifications

**TECHNICAL SPECIFICATION FOR FIRE DETECTION AND ALARM SYSTEM FOR
ADMIN/CHSS BLDG AND MAIN LIBRARY, UP MINDANAO**

1. GENERAL REQUIREMENTS

The fire detection and alarm system may comprise of main fire alarm control panels, optical smoke/heat sensors, heat sensors, and optical smoke/heat sensor with integral sounder units, manual call points, electronic sounders, repeat panels, and interface units, each with its own short circuit built-in isolators. All loop cabling and any other components and accessories deemed necessary for a safe, reliable and satisfactory system will conform to the relevant and applicable requirements and recommendations of Hospital Technical Memorandum, with BS EN 54-2 & 4 BS EN 50130-4 LPCB to the requirements of EN54 Parts 2 & 4.

Contractor will train and instruct client's personnel in the correct use, operation and supervision of the system, prior to the handing over of the project.

The system will be fully programmed to accommodate at least 128 fire zones. The system will be configured to allow on site modifications with the minimum of disruption using the PC based software to facilitate future changes or alterations to the buildings.

2. SYSTEM DESCRIPTION

The fire detection and alarm system will be designed to facilitate accurate identification of the source of heat / smoke / fire in their early stages to minimize occurrences of false alarms due to faulty equipment, electrical transients, system faults etc.

The fire alarm control panels will make final decision on whether a fire or fault exists by comparing the plotted patterns from a fire sensor against known fire and fault patterns held in its memory. System will be true Analogue with the ability to print the output from a fire sensor over a period of time.

All system components and devices will be connected to two-wire loop circuits (as shown in the typical schematics) with each component having its own individual built-in isolator. Removal or disconnection of any component from the loop will not affect the functioning and performance of other components and the system.

System will be of safe addressable type i.e. all the devices on the loops of the FACP will be allocated addresses automatically from the panel at the time of system power up on a numerically lowest unused value basis (algorithms) and also given an address during commissioning, the value of which will be stored in non-volatile memory, within the electronics module of the outstation. This value will be read during loop allocation and provided it is valid will be used to setup the outstations primary address.

SAFE Addressing will cover the benefits of Soft Addressing and also overcome the limitations of Hard Addressing. This means that if the devices are inserted or removed all the existing devices will keep the same address. The panel will allocate the address in strict sequential order when the loop is powered up to speed up commissioning and ensure that it is impossible for two devices to have the same address.

Fire Detection and Alarm Systems, which rely only on soft addressing or hard addressing techniques, are not acceptable.

Facilities will be provided to constantly monitor and check the following circuits and fault conditions:

- The power supply to the loop /s;
- For open-circuit, short-circuit, earth fault and any other fault condition in the loop wiring;
- For communication failure and errors in all cards and loops

All devices Optical/Heat Sensor, Heat Sensor, Optical Smoke /Heat Sensor Sounder, Fire Alarm Interface Units, Electronic Sounders, Manual Call Points, etc. will be installed on the same loop. And shall have build in isolators in all outstations

All devices will be assigned a maximum of 32 character alphanumeric label. In case of fire, fault or warning, the label of device sensing threshold will appear on visual display unit of the panel.

Any correction in label will have to be carried out from the built-in keyboard of FACP. Use of separate PC or tools for on-site programming will not be acceptable.

Any event i.e. Fire, fault or warning will be recorded with time, date and place of occurrence in the memory of FACP. These events can either be displayed on VDU or printed, as required.

Provision will be done at the fire alarm control panels to silence the loop powered alarm sounders but the visual indication will remain until the system is reset.

It will be possible to change the sensitivity of analogue sensors from fire alarm control panel only.

The sensitivity will be varied automatically, if required, by time zoning feature whereby it allows sensors to be programmed to respond at different sensitivities relative to any time of day, and any day of week.

Facility to introduce / change delay periods in operating loop powered individual sounders / group of sounders / speaker circuits, will be possible to program from FACP without the need to change any hardware.

The main fire alarm control panels will be located as shown on the schematics and the floor drawings.

3. SYSTEM OF OPERATION

In the event of a fire being reported from the smoke/heat Detectors, activation of manual call points the sequence of alarm operation will be as follows:

If a fire condition is reported from a smoke or heat detector, Manual Break Glass, then the evacuation alarm tone will be done by the electronic sounders in the same zone. Then after a certain delay (to be agreed at the time of commissioning) or after 3 minutes the alarm has not been acknowledged, the evacuation tone from the sounders will activated in the adjacent fire zones. Or on the floor directly above and below. All other floors or zones will be given the Alert tone. The evacuation of the building will be staged in phases to allow orderly movement of people.

4. SYSTEM, COMPONENTS AND DEVICES.

MAIN FIRE ALARM Multi-tasking, multi-loop modular type control and indicating panel of **SOFT AND SAFE** Addressable type will be installed as shown in the drawings. The Fire Alarm Control Panel will comply with BS EN 54-2 & 4 BS EN 50130-4 LPCB to the requirements of EN54 Parts 2 & 4.

The panel will be computer controlled using analogue technique to detect smoke / heat / fire conditions. The panel will be complete with, but not limited to, the following elements:

1. Visual display unit capable of displaying LCD Alphanumeric 40 characters x 8 line display minimum backlit display.
2. Built-in 40 character thermal printer operating when the access door is open there will also be an option to enable the printer when the door is closed.
3. Built-in full QWERTY keyboard. Labeling of devices will be done from this keyboard. Also, this keyboard if required will do any correction in label and on site programming & maintenance.
4. Integral rechargeable sealed lead acid battery and charger, with 24 hour back up in the event of supply mains failure.
